EDUCATION	University of Colorado Denver (CUDenver) Ph.D in Comp Science & Information Systems Advisor: Prof. Zhengxiong Li Guangdong University of Technology B.S in Internet of Things	Fall 2024 – Present Overall GPA: 3.7 Fall 2020 – June 2024
EXPERIENCE	Researcher, Mobile, Emerging Technologies & Applications (META) Lab University of Colorado Denver Supervised by Prof. Zhengxiong Li	Sep. 2021 – Present
AWARDS	Best Paper Award, Sensors S&P '25	2025
COMMERCIAL PRODUCTS	Cortex An open-source autonomous agent system for long-running research projects. Given a mission and a success criterion, it plans the work, dispatches pipelines of agents to execute it, keeps a structured log of progress in the repository, and reviews itself before each commit. - Built a mission-driven task system that decomposes a goal into tracked tasks with priorities, dependencies, and verifiable done-conditions, executing them autonomously and escalating only when blocked. - Designed multi-agent thread pipelines that run long jobs as a relay of focused agents, each with clean context and narrow scope, so handoffs carry only what the next stage needs. - Implemented a Node.js orchestration server driving remote agent instances over WebSocket, with Slack integration, scheduling, and desktop and Android clients built on Tauri.	2026 - Present
	AIStatus A real-time AI model status monitoring platform with intelligent routing SDK and local gateway proxy, helping developers and AI agents navigate the rapidly evolving AI infrastructure landscape. - Built a real-time status dashboard for 12+ AI providers, covering model pricing and ranking comparison, MCP server monitoring, and vector database status tracking. - Developed a serverless backend with Hono on Cloudflare Workers and D1, featuring a usage leaderboard, telemetry ingestion, and zero-ops deployment. - Shipped Python and TypeScript SDKs with zero-config intelligent routing, automatic provider discovery, tier-based model fallback, and cost calculation. - Implemented a local transparent HTTP proxy with API key rotation, provider fallback chains, SSE streaming, and per-request usage analytics.	2026 - Present
	Prompt2Robotics A novel framework enabling users to generate virtual robotic scenarios, collect training data, and train Vision-Language-Action (VLA) models through natural language prompts alone. - Developed an integrated system that translates user prompts into executable virtual environments for robotic policy training. - Successfully implemented support for 140 diverse scenarios from MetaWorld and LIBERO environments, enabling comprehensive robotic manipulation training. - Achieved end-to-end automation from prompt input to trained policy deployment, streamlining the robotics development pipeline.	2025 - Present
	Cyber Nachos A pioneering initiative dedicated to advancing robotics, AI, and cybersecurity, with a focus on developing intelligent and secure robotic systems to drive innovation across industries.	2024 - Present

- Designed and developed the [Cyber Nachos website](#), featuring project introductions, product releases, open-source tutorials, and published papers.
- Explored and open-sourced comprehensive installation guides for NVIDIA Isaac Sim and Isaac Lab.
- Resolved and open-sourced liquid simulation issues in NVIDIA Isaac Lab, enabling accurate fluid dynamics simulation with a fully documented example.
- Achieved over 15,000 total website visits as of February 2026.

Unity - Steam Networking Framework (Unity, C#)

2017

One of the first few solutions of Steam multiplayer networking for Unity. Used by commercial games such as [RUSSIA BATTLEGROUNDS](#), a battle royale game supports up to 32 players at the same time.

- Sensors S&P: mmVanish 2025

NOTABLE PROJECTS

Firefly Renderer (C#)

2018

It is a rasterizer running on CPU for research use.

- Accomplished the implementation of a comprehensive rasterization pipeline.
- Developed a Shader framework enabling the creation of various effects through the customization of Shaders, allowing for real-time debugging.
- Dynamically loaded scenes, materials, and Shaders to enhance flexibility and adaptability.

Firefly Renderer (C++, CUDA)

2018

It is a rasterizer running on GPU for research use.

Butterfly Language (C#, C++)

2018

It is a programming language with compiler and interpreter.

- Possess comprehensive proficiency in fundamental syntax and object-oriented features.
- Executed both frontend and backend development, encompassing syntax analysis, semantic analysis, and the generation of target bytecode.
- Developed a bytecode interpreter in C++, achieving a runtime speed of approximately 30% faster than Python.
